

Monitoring solutions for unique vessels

Overview

Thames Luxury Charters is a family business and have been present on the River Thames since 1710. They provide elegant and unique services on board their vessels.

The beautiful replica of a 1890s stern-wheeled Mississippi paddle steamer needed a major refurbishment, including a fully revamped upper deck, redesigned wheelhouse and several other extensive additions.

Outcome

Alicat Workboats, specialist providers of bespoke marine and engineering services, delivered the refit of Elizabethan.

They chose Oceanic Systems' Alarm, Control and Monitoring system, Poseidon, to provide the ideal solution to monitoring the engines and security of the vessel. Oceanic's Navigation Light Controller was also selected to monitor and control the vessels lights from the Poseidon display.

Oceanic were able to advise and assist Alicat Workboats with any technical questions about the system and Alicat were very pleased with the ease of installation and flexible interface Poseidon provided.
